SKILLS

Languages

- Python
- C
- HTML / CSS
- JavaScript

Tools & Platforms

- MS Excel, Word & PowerPoint
- Firebase
- Git / GitHub
- Netlify

Other

- Prompt Engineering
- AI Tools

EDUCATION

RV University, Bengaluru
B.Tech Hons – AI/ML (Major)
Design Thinking &
Entrepreneurship (Minor)
2026 – Present

CERTIFICATIONS

Prompt Engineering: Shaping
Better AI Responses — IBM
SkillsBuild, Dec 2025
Build Your First Chatbot — IBM
SkillsBuild, 2025

INVOLVEMENT

Secretary — FOSS Club
Core Head — Iterium Club
Member — NSS, The
Representatives

PROFILE

AI/ML undergraduate who learns by building. Ships full-featured web apps solo — from Firebase-backed finance trackers to e-commerce sites — and brings the same organized, detail-first approach to administrative and coordination work, alongside real internship experience in AI.

EXPERIENCE

AI Intern | FlyRank AI (Remote) Jul 2026 – Present

- Selected for a 12-week internship applying AI/ML skills to live projects, gaining exposure to real-world product and workflow challenges.

Freelance Web Developer | Self-Employed

- Delivered a professional client website end-to-end for a cybersecurity company as a first freelance engagement, managing scope and delivery independently.

PROJECTS

Sage Campus — College Discovery Platform | Next.js · TypeScript · Tailwind CSS

- Built a web app helping Indian students discover and compare colleges, built with a modern typed React stack.
- GitHub - <https://github.com/Aryan-K24/Sage-Campus>

Budget Buddy — Personal Finance Tracker | HTML · CSS · JS · Firebase

- Built a full-featured personal finance PWA from scratch: expense dashboard, a savings planner that projects goal timelines from income and savings rate, and a tracker for irregular income.
- Iterated through multiple rounds of real user feedback; currently preparing for Play Store publication as a packaged Android app.
- GitHub - <https://github.com/Aryan-K24/Budget-Buddy->

HabitFlow — Habit Tracking App | React · JavaScript

- Built calendar and analytics views entirely as derived UI over a central reducer — custom useCalendar and useAnalytics hooks pull from the same state without ever touching the core business logic.
- Hand-rolled the SVG line chart and streak/achievement system from scratch instead of pulling in a charting library, keeping the bundle lean and the visuals fully custom.
- GitHub - <https://github.com/Aryan-K24/habitflow>

StreamAI — AI Chat Assistant | Next.js · TypeScript

- Built a real-time streaming AI chat assistant that renders responses token-by-token as they arrive, instead of waiting for the full reply.
- Architected conversation state with React Context and a reducer pattern, keeping message flow and UI updates cleanly separated as the app grows.
- GitHub - <https://github.com/Aryan-K24/Stream-Ai-chat>

ShopKaro — E-Commerce Application | Vanilla JavaScript

- Built a single-page e-commerce app with authentication, dynamic navigation, product filtering, cart, and checkout — persistent state via local-storage, no frameworks.
- GitHub - <https://github.com/Aryan-K24/ShopKaro>
